

Uniq - Backend Developer (full-time)

What we are looking for

An experienced Node.js developer to support the development and launch of our product backend for the next 3-6 months. Experience with Node.js and associated frameworks (Express, Hapi, Koa or similar) is a must. Experience with NoSQL databases, specifically MongoDB, is a big plus. Furthermore, you should feel comfortable with git, BDD unit testing (mocha, lab or similar), continuous integration (Travis, Pipelines, Gitlab or similar), cloud deployment on Heroku/AWS and using cloud monitoring/logging services. Clean code samples are expected (open-source projects welcome), and a small programming task will be given before an interview.

What we offer

Join a one-of-a-kind [founder team](#) as we start to build the product we have prototyped for the last 6 months. This is probably one of the most exciting phases to come onboard, as we're starting greenfield and with high momentum. We have a culture of iterating quickly, giving honest and constructive feedback and embracing modern technology. As our main backend developer you will have a huge impact on our product, making sure our platform will run smoothly and scale to thousands and millions of happy users. We offer competitive compensation, a great work environment in Berlin, the possibility to work remotely (one day per week) and most importantly the chance to build an exciting product that helps people change their lives for the better.

When to start

Early June 2017

Where to apply

Please send your application to jobs@uniq.vision. We usually respond within 48 hours.
